

Amendments in the Claims: (struck-through parts deleted and underlined parts added)

1. (currently amended) A post urination drip collector device for removably positioning over a penis, said device comprising:

- 5 a tubular member having a first end, a second end and a perimeter wall extending between said first and second ends, said first and second ends being open, a cap member being integrally coupled to and covering said second end such that a housing is defined, said cap member including a peripheral lip being integrally coupled to and extending outwardly away from said
- 10 second end, said lip being orientated generally perpendicular to said perimeter wall, a peripheral wall being integrally coupled to and extending away from an outer edge of said peripheral lip, an end wall being integrally attached to and extending along a length of said peripheral wall;
- 15 an elastic band being attached to and extending around an outer surface of said tubular member, said elastic band being positioned generally adjacent to said first end, said band being continuous and having a substantially rectangular cross-section; and
- an absorbent material being attached to and substantially covering an inner surface of said cap member.

20

2. (original) The device of claim 1, wherein said housing comprises an elastomeric material.

Claims 3 and 4 (cancelled)

25

5. (original) The device of claim 1, wherein said absorbent material comprises a cotton material.

Claims 6-8 (cancelled)

30

9. (currently amended) A post urination drip collector device for removably positioning over a penis, said device comprising:

a tubular member having a first end, a second end and a perimeter wall extending between said first and second ends, said first and second ends being open, a cap member being integrally coupled to and covering said second end such that a housing is defined, said housing comprising an elastomeric material, said cap member including;

a peripheral lip being integrally coupled to and extending outwardly away from said second end, a peripheral wall being integrally coupled to and extending away from an outer edge of said peripheral lip, an end wall being integrally attached to and extending along a length of said peripheral wall;

an absorbent material being attached to and substantially covering an inner surface of said cap member, said absorbent material comprising a cotton material; and

an elastic band being attached to and extending around an outer surface of said tubular member, said elastic band being positioned generally adjacent to said first end, said band being continuous and having a substantially rectangular cross-section.

Claim 10 (Cancelled)
